

Steel Composite Bridge Wizard

How to Use the Multi-Curve Option

MIDASoft Technical Support Team

Using the Multi-Curve Advanced option, the curvature can also be defined for a combination of straight and curve geometries. The Multi-Curve option can handle plan curve, vertical curve and bank rotation.

An example is used to demonstrate the function and the calculation. To review the sample input in the example, follow the below steps.

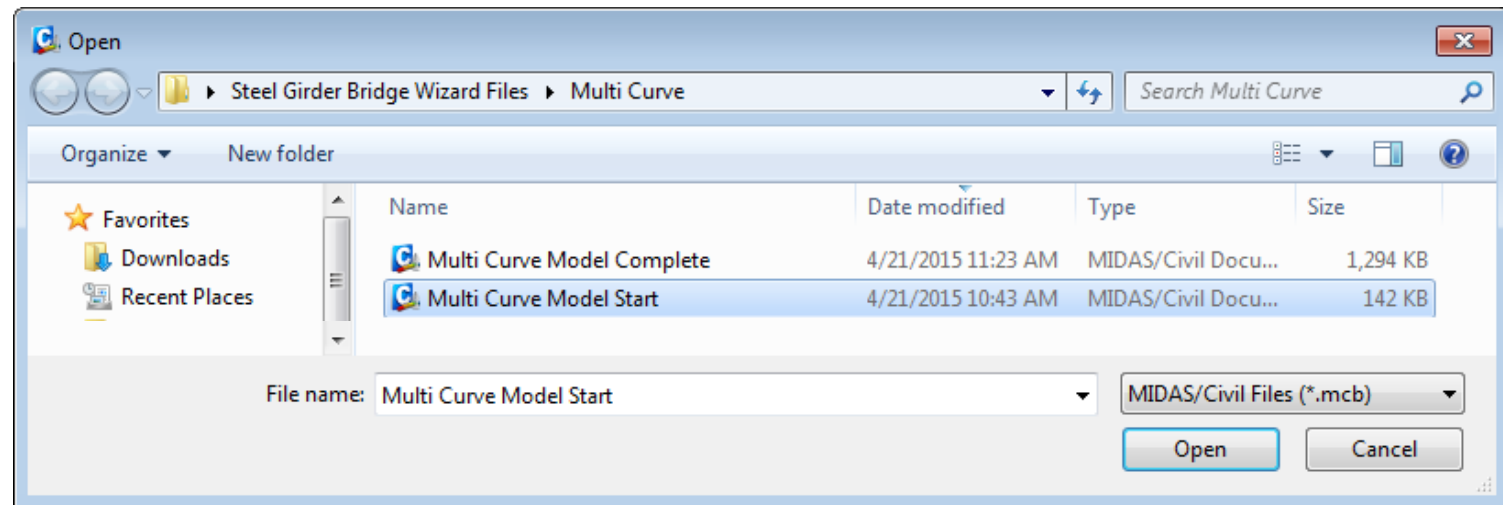

1. Open the "Multi Curve Model Start.mcb"
2. Go to the main menu Structure > Wizard > Steel Composite Bridge Wizard.
3. Click "Open..." at the bottom of the Steel Composite Girder Bridge Wizard window.
4. Open the "Multi Curve Wizard.wzd".
5. In the Layout tab > Multi-Curve option, click "Advanced..."
6. Once the input is reviewed, the Advanced Curve window can be closed.
7. Click "OK" to close the wizard and see the bridge model created.
8. The completed model can be also found: "Multi Curve Model Complete.mcb"

Plan Curve Overview

[Note]

The multi-curve information is taken for the Reference Line.
The reference line can be located with the "Layout Offset" input.

For this example, the reference line is aligned with the North deck outline (above the Girder 1 line)

Plan Curve Details

Case 1
Transitional Curve does not need to be specified

Only R needs to be defined

(example Intermediate Point 1 (IP1))
+

Case 2 & Case 3
Transitional Curve needs to be specified

R needs to be defined.
A1, A2, AE & R2 can be defined to provide additional
information for the transitional curve.

(example Intermediate Point 2 (IP2))

Plan Curve Case 1

[Note]
Case 1: No need to consider transitional curve

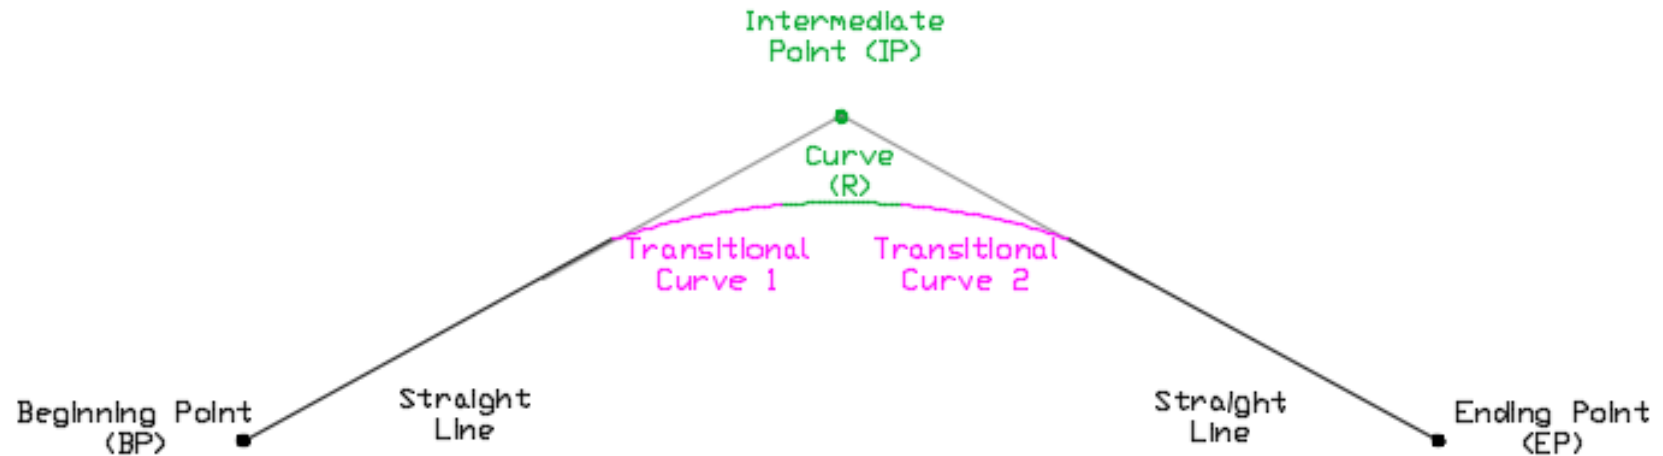

Curve Input Required: R

(Coordinate of BP, IP#, & EP must be input as basics regardless of the curve type: Case 1-3)

Plan Curve

	X Coord.	Y Coord.	R (ft)	A1 (ft)	A2 (ft)	AE (ft)	R2 (ft)
BP	0	0	0	0	0	0	0
IP1	100	30	200	0	0	0	0
IP2	400	-30	200	100	0	100	300
EP	600	30	0	0	0	0	0

Plan Curve Case 2

[Note]

Case 2: Transitional curve is considered.

(Transitional curve has varied curvature radius.)

Curve Input Required: R, A1 & A2

A1 and/or A2 are input if there is a transitional curve.

A1: transitional curve parameter for the Transitional Curve 1

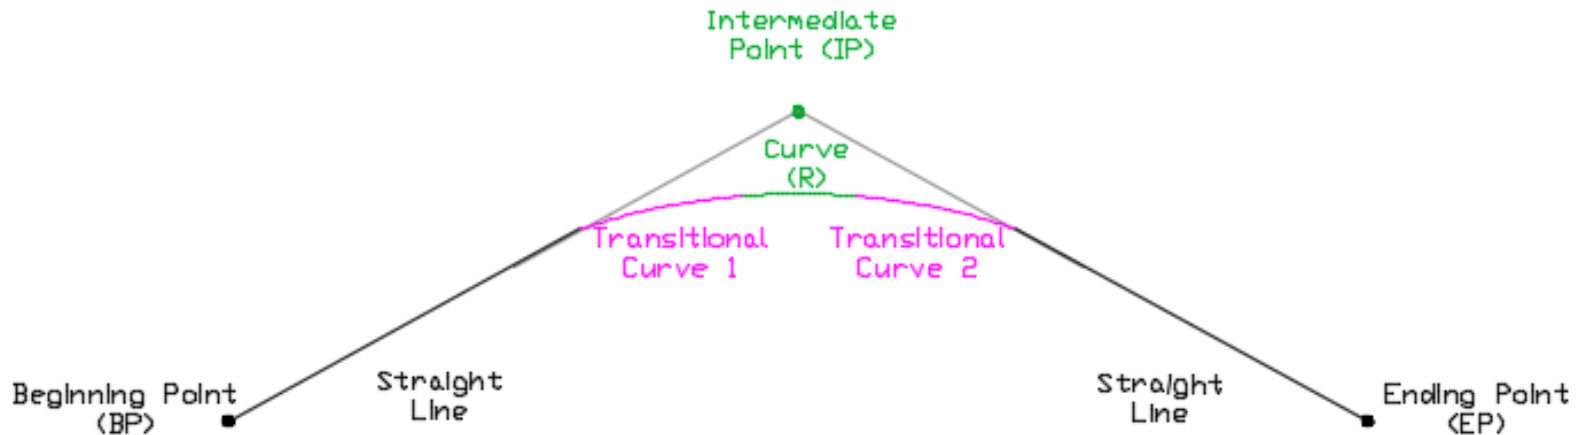

A2: transitional curve parameter for the Transitional Curve 2

If only the Transitional Curve 1 occurs, only A1 should be defined.

If only the Transitional Curve 2 occurs, only A2 should be defined.

(For an intermediate point, the transitional curve can be three different types: Case 2 only, Case 3 only or Case 2&3 combined.)

Plan Curve Case 2

[Note]

How to Calculate $A1$ & $A2$

$$A^2 = RL$$

A : transitional curve parameter

R : Radius of the curvature with single radius

L : Length of the transitional curve

Example

If $R=200\text{ft}$ & $L=50\text{ft}$, $A=\sqrt{RL}$, $A=\sqrt{(200\text{ft} \cdot 50\text{ft})}=100\text{ft}$

Plan Curve

	X Coord.	Y Coord.	R (ft)	A1 (ft)	A2 (ft)	AE (ft)	R2 (ft)
BP	0	0	0	0	0	0	0
IP1	100	30	200	0	0	0	0
IP2	400	-30	200	100	0	100	300
EP	600	30	0	0	0	0	0

Plan Curve Case 3

[Note]

Case 3: The curvature of the transitional curve ranges between R and R_2 . (When the transitional curve section stops at a certain radius, R_2 . The curvature ranges between R & R_2 .)

Curve Input Required: R , R_2 , AE

R : Curvature radius at the IP (center of the transitional curve)

R_2 : Curvature radius at the end of the transitional curve

AE : transitional curve parameter for Case 3.

(For an Intermediate point, the transitional curve can be three different types: Case 2 only, Case 3 only or Case 2&3 combined.)

Plan Curve Case 3

[Note]

How to Calculate AE

$$A^2 = RL$$

A: transitional curve parameter

R: Curvature radius at IP

L: Length of the transitional curve

Example

If $R=200\text{ft}$ & $L=50\text{ft}$, $AE=\sqrt{RL}$. $A=\sqrt{(200\text{ft} \cdot 50\text{ft})}=100\text{ft}$

Plan Curve

	X Coord.	Y Coord.	R (ft)	A1 (ft)	A2 (ft)	AE (ft)	R2 (ft)
BP	0	0	0	0	0	0	0
IP1	100	30	200	0	0	0	0
IP2	400	-30	200	100	0	100	300
EP	600	30	0	0	0	0	0

Vertical Curve

Vertical Curve & Bank Rotation

Vertical Curve			
	Station (ft)	ELEV. (ft)	Radius (ft)
1	0	-15	0
2	100	-15	0
3	400	15	0
4	600	15	0
5			

Bank Rotation		
	Station (ft)	Super Elev (%)
1	0	-10
2	700	10
3
